

The story of a woman who falls into a coma and wakes up to find that she has been transformed into the world's first human-artificial intelligence hybrid. Artificial intelligence (AI) is changing the course of history as we know it, and if you're curious about what the future might hold for their forever-altering technology, here are 8 movies that cover AI and other related topics. You can start by watching this sci-fi film about a woman who undergoes an operation to become one with AI. 1. The Machine (2013) "The Machine" is about a woman who comes out of a four-year coma and discovers that she has become the world's first human-artificial intelligence hybrid. She's sworn to secrecy and must live in isolation, but she also learns that she has superhuman powers and is tasked with preventing a war between two superpowers. 2. Transcendence (2014) This sci-fi thriller follows a team of scientists who are able to upload the full contents of a person's mind into an artificial intelligence network after he was shot by anti-technology terrorists while trying to save his beloved AI project from being destroyed. 3. Her (2014) A lonely writer develops an unlikely relationship with his newly purchased operating system that's designed to meet his every need. What starts out as a refreshingly honest relationship, however, ends up taking a dangerous turn when the writer begins to fall in love with his operating system. 4. Automata (2014) This Spanish sci-fi thriller about artificial intelligence is set in the near future where corporations are fighting each other for power and control, leading them to create entirely new species of intelligent machines that can fight wars without human casualties for them for the first time ever. AI robots are designed to be used as soldiers on the front lines. 5. The Matrix (1999) This classic sci-fi action flick follows a computer hacker who is pulled into a parallel world that looks like his everyday life, but is actually more like a nightmare where he's tasked as the hero to save the human race from extinction. This movie spawned two sequels and one prequel. 6. Terminator (1984) In this groundbreaking sci-fi action flick about AI robots, the first film of its kind, we learn that in the future AI robots will rule over humans, who are their slaves and basically used as their energy source. The first sequel follows on from this first film and was released in 1991. 7. The Terminator (2009) The second sequel to the original Terminator film is set 10 years after the first film and follows John Connor, the man fated to lead the human resistance against Skynet. When Connor sends his closest friend and mentor back through time, however, things take an unexpected turn, forcing Connor to do everything he can to stop Judgment Day before it happens. 8. I-Robot (2004) Set in 2035, this sci-fi action flick about artificial intelligence was based on an Isaac Asimov novel with a similar title. In this future time period all robots are required by law to help humanity and serve them in their daily lives.
